Setup of the rack / explosion drawing of packing

To avoid damage during transport your turntable comes carefully packed. Unpack all the parts in the 2 boxes. Please be aware that the parts of the INVITUS-Stand are very heavy. Ensure that a second person is available to assist you.

1. Ground plate

Take the ground plate and place it where you want to have the INVICTUS.

1.2 Ground plate

Take a look at the bottom of the ground plate and open the screw by turning it 2 times counter clockwise. See pictures on the right side. This loosens the fittings for the tubes.

2. Inserting the light

Use the provided halogen light bulbs and insert them into the sockets inside of the tube holders.

3. Mounting the tubes

Take out each of the tubes and screw them onto the tube holder by turning them clockwise onto the holder. See the picture on the right side. Make sure you have placed them correctly on the thread. They must be able to be turned easy and smooth. Turn them down until they nearly touch the ground plate.

4. Adjusting the tubes

The tubes need to be adjusted so that the angle of the cut outs for the glass shelf are correctly positioned. Therefore use the provided wood shelf and place it inside the slots and adjust all 4 tubes in a way that the slots are parallel and the wood can be slid in easy. Then tighten the tubes by turning the screw on the bottom of the ground plate. See 4.1 for details.

4.1

5. Mounting the feet

Use the 4 provided feet and screw them into the threads in the bottom of the ground plate. Place the stand exactly where you want it to be. Then level the stand by turning the 4 feet clockwise or counter clockwise. Make sure that the inserts inside the top of the tubes are turned in so far that they are lower than the tube itself.

6. Mounting the top plate

Take out the top plate and place it on top of the 4 tubes like you see in the picture beside. Use the provided 4 screws and screw the top plate into the tubes.

7. Mounting the rubber protectors

Take out the wooden adjustment plate and decide where you want to have the glass shelf to be positioned inside your stand. Place the 4 rubbers in the cutouts for the glass shelf to protect it.

7.1 Glass shelf

After the rubbers are positioned ask somebody for help and insert the glass shelf into the stand. We suggest to not let it slide on the rubbers as they might get off.

8. Done

After successfully finished all the assembly instructions your INVICTUS-Stand should look like on the picture beside. You can now put the plug of the transformer into the main outlet and use the internal light by sliding the knob of the transformer left or right.

Dimensions

H 80,0 cm W 80,0 D 70,0 cm

Weight: 189 kg or 417 pound
